EDUCATION

B. Eng. Software Engineering Co-op - McMaster University

Graduation: Apr 2022

Relevant Courses: Software Design, Data Structures & Algorithms, Information Security

EXPERIENCE

Backend Developer Co-op

May – Aug 2020, May – Aug 2021

QED Remote

- Developed a new **GraphQL API** in existing codebase to minimize frontend requests and decrease web payload
- Added **Django** JSONFields into our database to increase versatility across our existing models while preserving our custom sorting and searching functionality
- Created an internal **Chrome extension**, adopted by the entire team, to quickly copy the Django session ID used for debugging requests in **Postman**
- Migrated **50+** routes in a **Django** REST API to a new architecture while maintaining backwards compatibility
- Built a **Slack bot** in **Node JS** to send status updates and actionable server notifications to the bug team

Full Stack Developer Co-op

Jan – Apr 2020

Caliber Communications

Hamilton, ON

- Built new configuration tools using **Electron** and **Express JS** used for proprietary setup of security cameras
- Designed features and UI components for Caliber's internal **Angular JS** application used by **50+** employees daily including monitoring reports and live camera feeds
- Wrote **Puppeteer JS** browser automation scripts to apply settings to security devices without an API

Frontend Developer Co-op

May – Aug 2019

5Fold

Barrie, ON

- Built performant, high conversion websites in **Gatsby JS (React)** while working closely with the design team
- Created dynamic React components using **ES6** and **React Hooks** that were used across multiple client sites
- Achieved **100%** Google Lighthouse score on all projects by implementing **Google's Progressive Web App** guidelines and **AODA's** accessibility standards

PROJECTS

Vaccine Appointment Finder

May 2021

- Built a **Vue JS** app to display all available vaccine appointments in the Halifax region using a clean, sortable table designed with **Bootstrap** components
- Used an **AWS Lambda** function written in **Python** to pull data directly from the provincial database
- Integrated the **Google Maps Directions API** to allow for sorting each appointment location by distance

SKILLS

Languages: JavaScript, Python, TypeScript, HTML, SCSS, Bash

Frameworks/Tools: Node.js, React.js, Vue.js, Django, PostgreSQL, Git, AWS Lambda, Netlify, Firebase, Jira
